

CORK SCHOOL OF ART.

WE are pleased to see, by the last report of the Society of Arts, that the students of the Cork School of Art are again successful in the technological examinations, viz.,— Jeremiah F. Mullins, 1st elementary, with a prize of £5; Mathew Mullins, 2nd advanced, steel manufacture; Thomas Fleming and James Pulvertaft, 2nd elementary. The two latter, on completing the subjects required by the Science and Art Department, will be awarded the full certificate. About two years since it will be remembered that a gratifying proof of the Cork students in open competition with the artizans of the United Kingdom was recorded, when Mr. Jeremiah Mullins carried off the silver medal of the Worshipful Guild of Coachmakers, and last year his brother, Mr. J. Mullins, was awarded a scholarship of £50 by the Society of Arts, entitling him to attend at the Queen's College for scientific instruction.

Commenting upon the subject, the local *Herald* says :—"It is to be hoped that these technical examinations will be more generally availed of by the intelligent artizans and others engaged in the constructive arts, and that they will endeavour to qualify themselves by attendance at the evening lectures and studies specially adapted for them at the Cork School of Art. Independent of the money prizes which may be obtained, the knowledge which will be gained is calculated to make them more skilled and intelligent workmen." So say we.
